

1 – Semantic Coding

Semantic coding means using the proper element that describes the data it contains. A `<p>` should not be used for headings; a `<table>` should contain a data chart and not be used for layout.

Identify the most appropriate html elements for the described data below. You will find the answers at the bottom of this page.

1. A block of text.
2. A few words in a sentence that have greater significance than the rest of the words in the sentence.
3. The third most important heading on the page.
4. A list of crayon colours.
5. A list of instructions for building a table.
6. A list of credits for a movie – the name of the character paired with the name of the actor.
7. A single line quote from one of your happy clients.
8. Several paragraphs of text quoted from another source.
9. The Toronto Blue Jays game schedule.
10. An image that is part of an `<article>`.

ANSWERS
